Career Objective

Having more than 4 years of experience in the field of Information Technology has tremendously prescribed me the life cycle of tools in internet. Looking forward to get into more specifics by working or designing products, providing architecture to build model through new and modern technologies to enhance the capability of the tools. In the process, contributing towards the success of organization and enhancing my skill sets through continuous learning and implementation.

Technical Skillset

Programming Languages	Python, C#
Web Frameworks	Django, Flask, MVC
Cloud	Microsoft Azure
Databases	SQLite, PostgreSQL, SQL Server
IDEs & Tools	PyCharm, Jupyter Notebook, Visual Studio
Accessibility tools	JAWs, Accessibility tool for windows

Projects & Roles

Client – Internal
Project – Resource Management Tool
Role – Developer

Project and Role details:
- RMG tool is basically designed to track the candidates that has been already hired to TCS or FTEs who are released from projects and available to join a different project. So, we are bringing all the Staffing Managers, Hiring managers, Product managers, Group project managers under one roof to full fill their requirements.
- So, right from assignment of available associates, going through the screening process and finally to get mapped to a certain project, all these things will be performed inside the tool itself.
- My role in this project has started from requirement analysis and information gathering, designing the blueprint, code implementation to test the functionality of the application. Mostly I am engaged with the backend development of this application.
- The tool has been designed with Python as the coding language, Django to provide the web framework needed to support the project, SQLite as the database, and HTML CSS as the look and feel of the application.

Client – Microsoft
Project – Business Letter Management
Role – Engineer

Project and Role details:
- The letter management tool in Microsoft is responsible for gathering information regarding the employee's travel to any Microsoft locations providing them the required letters to the travels which would be treated as the legal document for their travel as well as for visa approvals.
- In this project I was working as a developer whose responsibility was one engineering. So, I was responsible for the enhancement of the application, bug fixes, direct engagement with the business as well as customers and also, the migration of entire application from IAAS to PAAS.

Client – Microsoft
Project – Employee Experience
Role – Engineer

Project and Role details:
- This application deals with all the FTEs, vendors and interns of Microsoft, where anyone can see the organisational hierarchy details of anyone associated with Microsoft. And shows up minimal information of the employee like his/her alias, manager details and level in the organisation along with their corporate phone numbers if prior consent is provided in upstream applications.
- I am working as the only point of contact for this application right now and if anything goes wrong, I am the one who needs to respond. Generally, I am working mostly on bugs and SDL issues.

Significant Achievements

- 8 times awarded 'On the spot award' by the team management.
- My blog for server migration got published in internal TCS portfolio.
- 3 years continuous champion of Microsoft Hyderabad Premiere League cricket tournament.
